

IDEAS

Filter

①, ②, ④, ⑥, ⑦ and ⑨
Other charts like line and stacked bar chart can let everybody to understand easily

Categorise

Trend: ①, ②
distribution: ⑥, ④

Preparation: ②

Questions

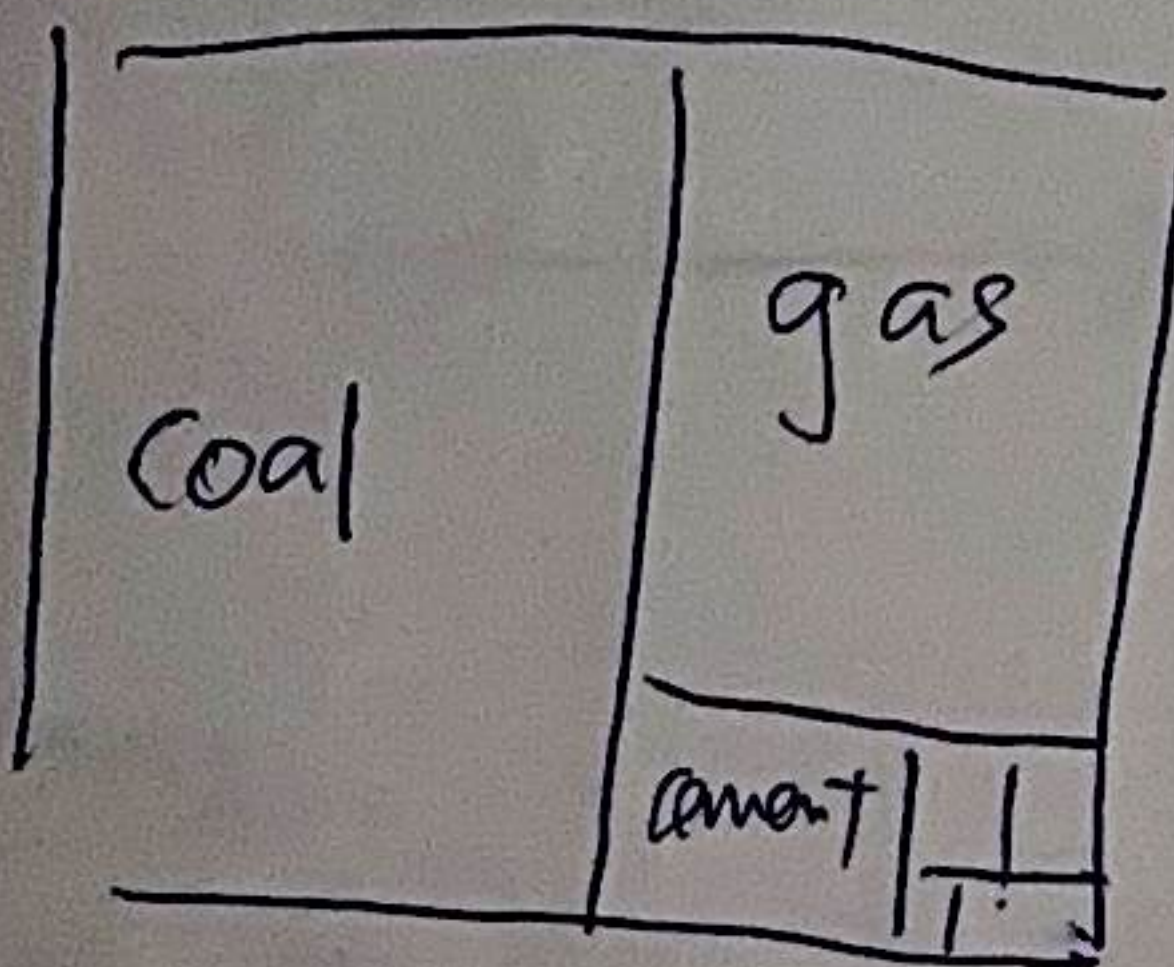

For ⑥ is it a good chart to find out distribution

Author

LAYOUT

Focus

- The first 3 chart is showing the total emissions in year & by country or source of emissions
- The fourth chart is distinguish which source emit most emission

title : Assignment 2

Author ~~Se~~ wai Tien

date : 2/10/2024

sheet 2

Operation

- 1.) use filter to ~~set~~ select data, ~~to show~~ so user ~~can be~~ is able to find what they want

Discussions

The visualisation is too focus on emissions and year. It does not tell the reader something. Not only that using the filter for each graph will need more attribute as my data set has not enough data

LAYOUT

Title : Assignment 2

Author : Wai Tien

Date : 3/10/24

Sheet : 3

operations

- The map will have sort or filteration for year

- Bar chart will have filteration for which source ~~of~~ the user want to see

- ^{area} line chart can choose a specific area to see that part of data.

Discussions

- These charts are connect to analyse the data for storytelling

- is it better to use line or area chart. worried that area chart will be a bit complex for user. As area chart will clump together

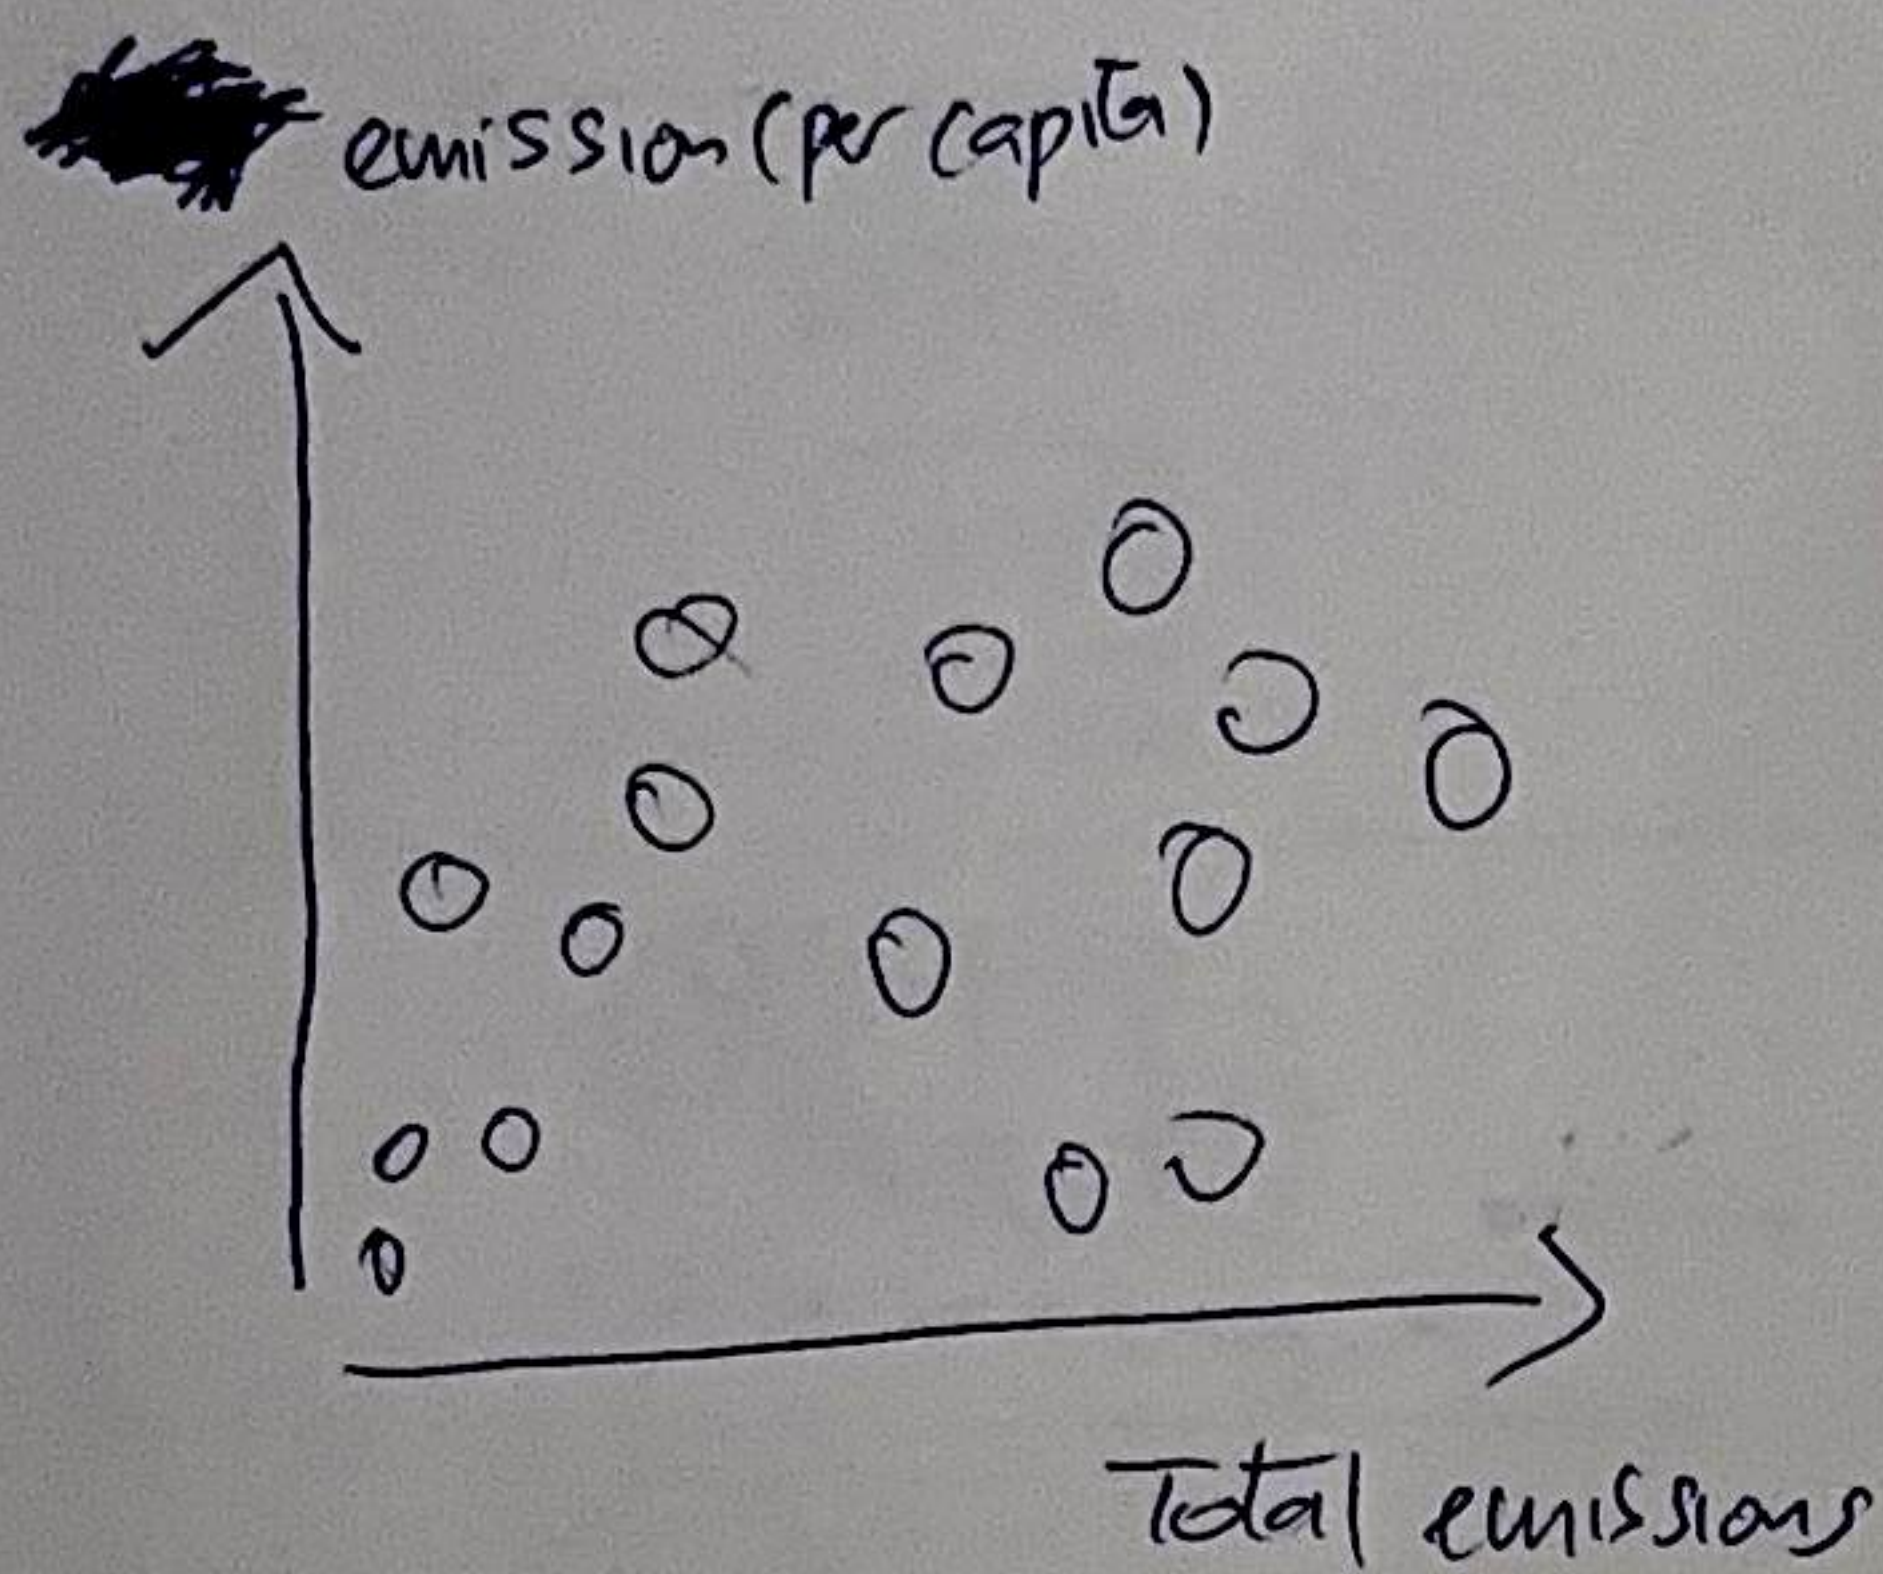

Focus.

Use the Map to show the CO₂ ~~emissions~~ emissions for the countries

Then use stacked bar chart to show the major sources emissions to the world. The area chart show the coal emissions as Australia produce and used ~~the~~ ~~the~~ coal

LAYOUT

Focus

- The scatter plot is use for comparing the total emissions and per capita emissions by the country. Tree map can analyse which source produce the most emissions. The heat map indicate which country has the most per capita emissions.

Title: Assignment 2

Author: wai tien

Date: 4/10/2024

Sheet: 4

operations

- ~~The~~ The scatter plot should allow to zoom in as logreal send ~~more~~ Total greater Total emissions mean greater per capita emission but here we try to find out
- The heat map should have legend to ~~the~~ tell user ~~us~~ about the colour indicate something

discussion

- ~~the~~ Scatter plot and heat map is a good chart to ^{help} ~~tell~~ user to analyse the emission produce by country
- Tree map is not really important as they have no much into to tell user important message

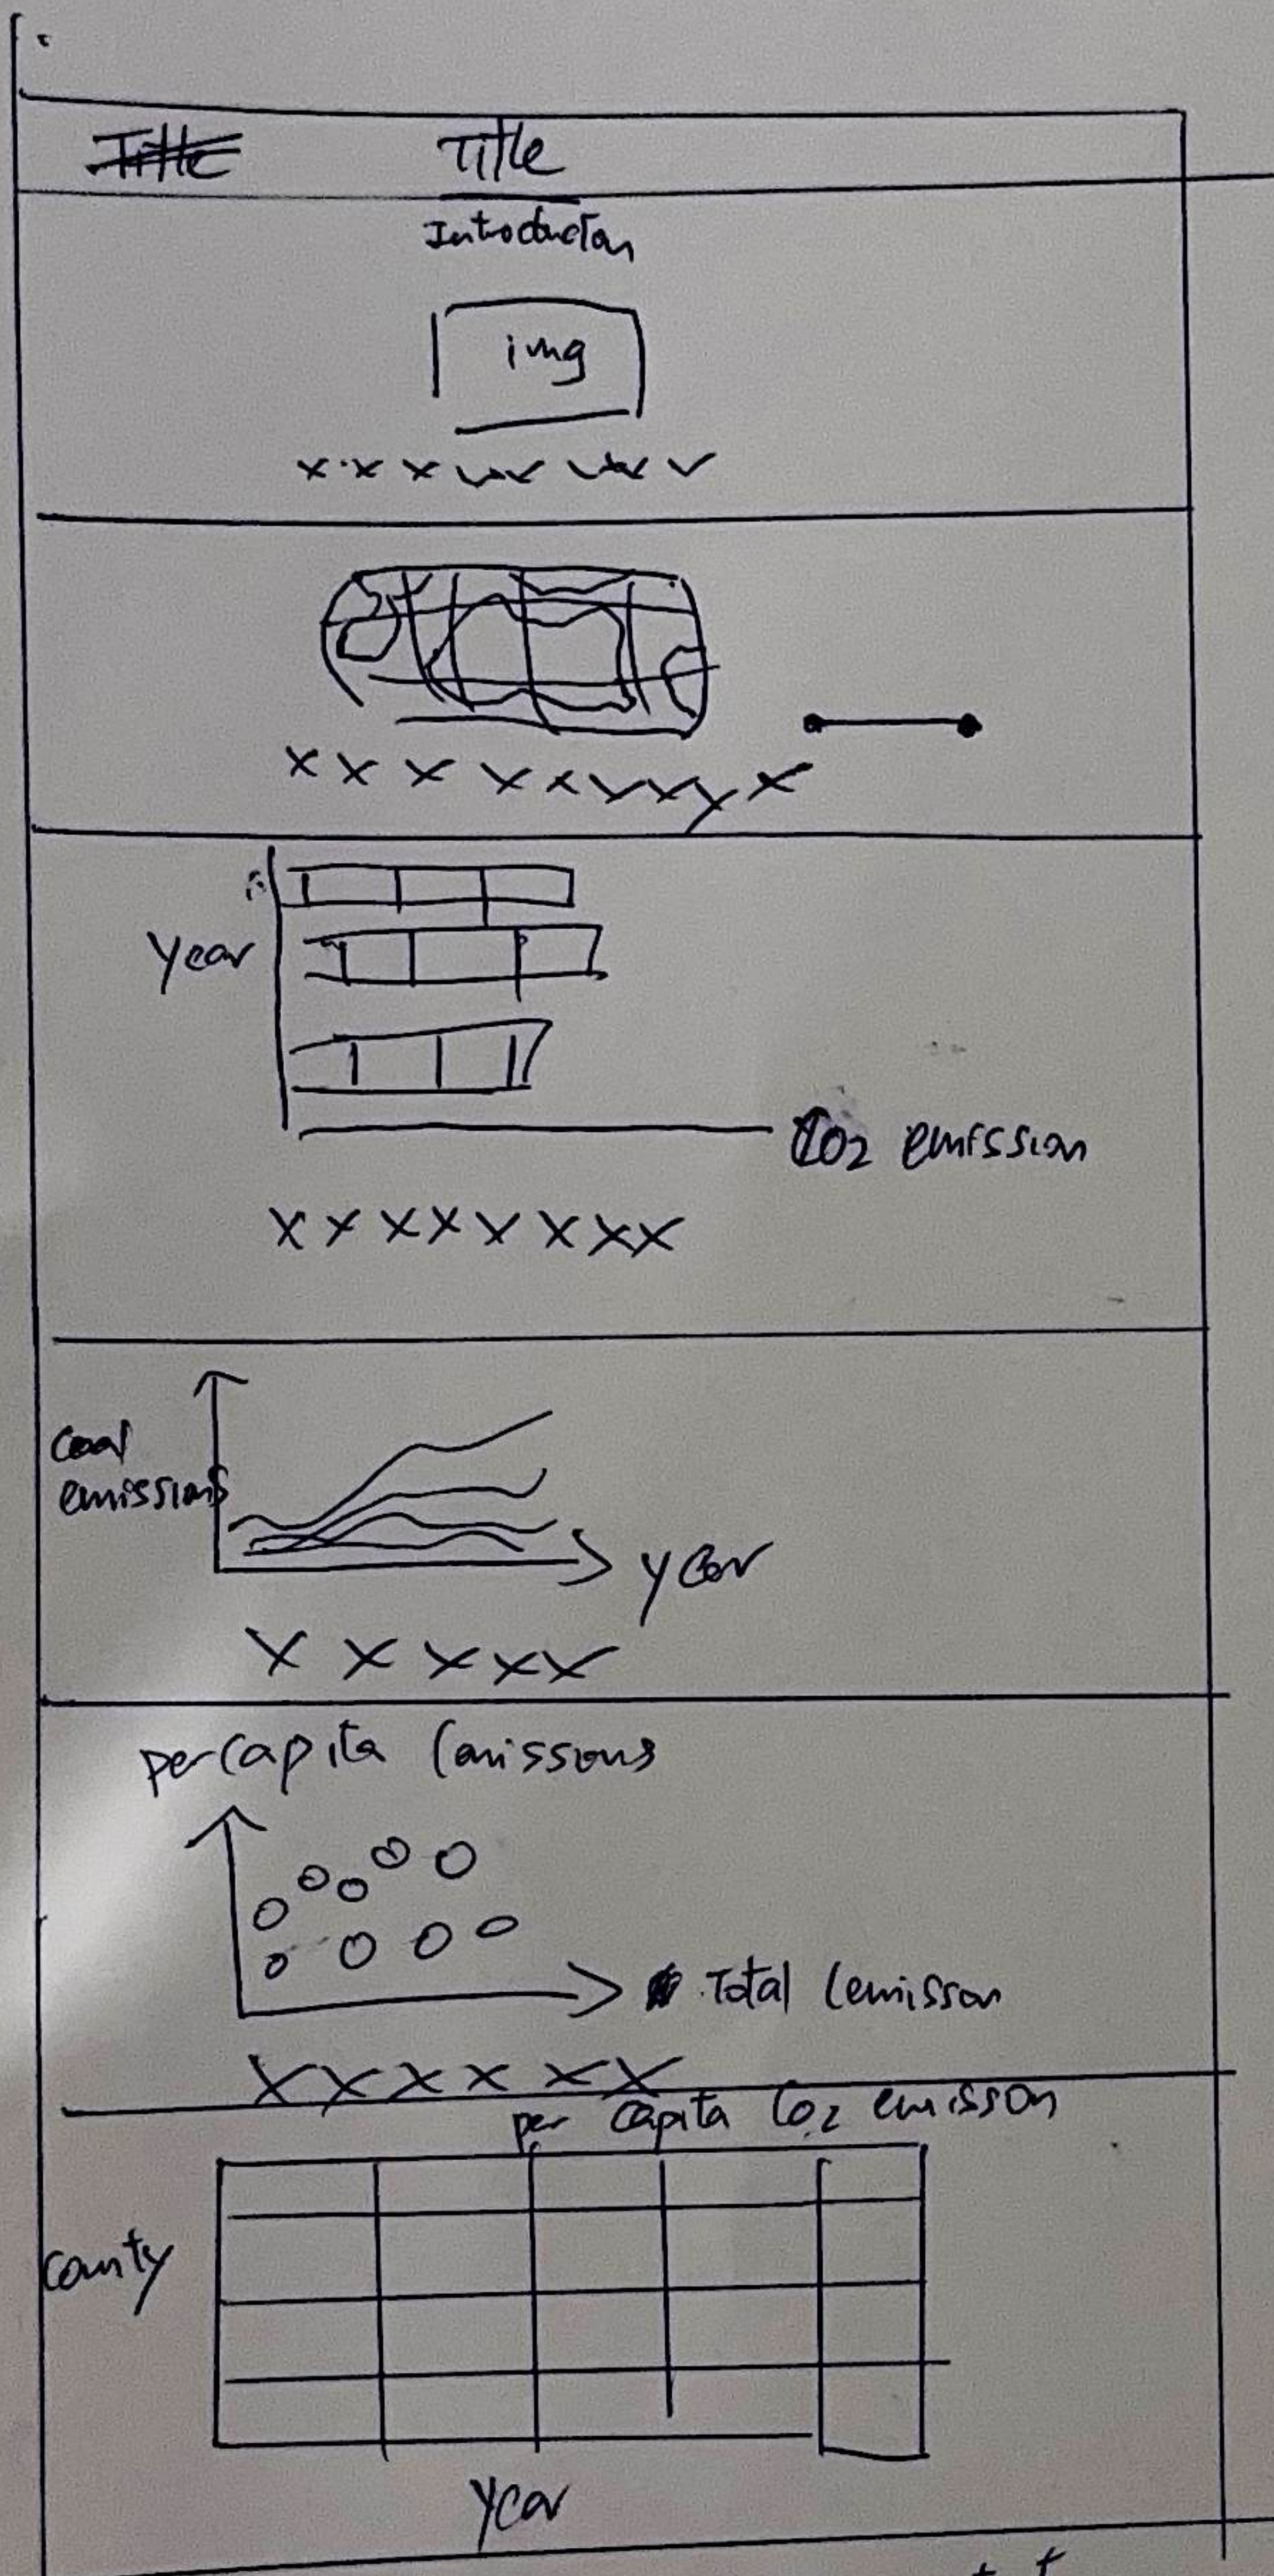

LAYOUT

Title : Assignment 2

ID No : 4/10/2024

Sheet 5

operators

- map will have slider to change year
- stacked bar chart will have drop down menu to select what source
- line chart can select to see which country
- scatter plot can zoom in to see the difference between each country

detail

- using csv to clean data
- ~~Selecting data~~
- use D3 library and vegalite examples

Focus all of the chart are equally important. First chart show the whole world total emission in year by using map. Second chart show the emission produce by the source. Third chart is talking about coal emissions for the top country. Fourth chart comparing per capita emission and total emission.
